Subject: (Hippy@xtra- Lance 2/2)i guess you can call this a submission
Date: Friday, 3 March 2017 2:29:51 p.m.

i guess you can call this a submission on Healthy Rivers Plan

keep it simple

instead of blaming large scale farming etc (as blameing does not fix anything).

1. make it law that all farmers must fence off waterways on their farms with space between fence and water in areas where public use said waterway to still allow use and to allow space for item 2 listed below. this space would need to range from 5 meters to 20 meters depending on location.
2. encourage and assist in the planting of suitable plants along waterways including trees in a staggered manner so wetland plants are closest to water working back to shrubs then trees (most or all native). this planting would be inside above mentioned fence with a 1 to 2 meter gap between fence and nearest tree to keep stoke away from plantings.
3. disallow dumping (and monitor) of farm waste into any waterways.

The above would need to include feeder creeks and streams but could be reduced in size as needed.

Smaller waterways would need to be assessed for their Eco-importance for species like eel and other fish and water creatures as some are used as pathways.

The above system would give plants the chance to 'clean' run off (at least to a higher degree than not having them there) before it gets to the waterways, there for less waste and fertilizers in the water. Crop dusting should have to be done by land based means except for locations without large (wider than 0.5 meters in width) waterways, high country that is a major feeder to waterways should be heavily limited.
