

# Waikato river water quality monitoring programme data report 2021

**Prepared by:**  
**Briar Mills**

**For:**  
**Waikato Regional Council**  
**Private Bag 3038**  
**Waikato Mail Centre**  
**HAMILTON 3240**

**Publication Date: March 2023**

Peer reviewed by:

Date 07/03/2024

Approved for release by:

Ed Brown Date 5/05/2023

### **Disclaimer**

This technical report has been prepared for the use of Waikato Regional Council as a reference document and as such does not constitute Council's policy.

Council requests that if excerpts or inferences are drawn from this document for further use by individuals or organisations, due care should be taken to ensure that the appropriate context has been preserved and is accurately reflected and referenced in any subsequent spoken or written communication.

While Waikato Regional Council has exercised all reasonable skill and care in controlling the contents of this report, Council accepts no liability in contract, tort or otherwise, for any loss, damage, injury or expense (whether direct, indirect or consequential) arising out of the provision of this information or its use by you or any other party.

# Acknowledgement

Thanks to Aroha Salu, Asaeli Tulagi, Chris McKinnon, Debbie Eastwood, Douglas De Brito, John Hughey, Nicole Squires, Noel Bates, Shana Edgecombe, Sophie, Taylor Thomas and the hydrology team for their commitment and reliability in undertaking field measurements and sample collection, as well as Aroha Salu for co-ordination of the field aspects of sample collection. Thanks to Samii Thornborough for assisting with the report formatting.

Hydrological flow data is provided by Mercury Energy (Hydro Lakes, Waiotapu stream and Reid's Farm), Contact Energy (Ohaaki Bridge), and Genesis Power (Huntly) through agents Opus and NIWA.

# 1 Introduction

## 1.1 Background

A range of physical, chemical and microbiological water quality parameters have been monitored at several sites along the Waikato River since 1989 as part of the Waikato River Monitoring Programme (WaRiMP). Currently, the programme includes 12 sites monitored at monthly intervals, see Figure 1. This report is the 31<sup>st</sup> since the re-design of the programme and covers the calendar year of 2021 and follows the format of the previous data report (Bates, 2020). The previous reports can be located through the following link: [Publications | Waikato Regional Council](#).

The WaRiMP and the technical reports address the following questions:

1. What is the quality of the water now?
2. Why is the water of the observed level of quality?
3. Is water quality getting better or worse? If so - what makes it change?
4. How can we improve the quality, ecological health and integrity of the Waikato River?

The monitoring information allows the Council to:

- determine compliance with classification standards,
- define the suitability of the resource for various beneficial uses and values of the water,
- monitor the impact of major discrete point source discharges on water quality,
- monitor the impacts of diffuse discharges on water quality,
- provide a basis for evaluating the effectiveness of resource management measures.

This dataset is invaluable for the evaluation of the Waikato River: its state, the pressures on it, and its response to these pressures. We need to continue to gather comprehensive, reliable, and good quality data on the Waikato River to protect and enhance its values into the future.

## 1.2 Report Content

The report provides information on:

1. Routine monthly monitoring of water quality at 12 sites:
  - Year 2021 summary data tabulated by parameter for each location and reported with the median of the previous 5 years.
  - Key parameter graphs showing the average water quality for 2021 at each location, compared to results of the previous 5 years.
  - Summary tables identifying the number of samples meeting ‘satisfactory’ and ‘excellent’ water quality standards and guidelines.
  - Raw data for routine parameters in 2021.
  - Raw data for trace metals tested every five years.
2. Additional information is provided in the appendices on:
  - Flow (*Appendix I*).
    - Annual median flow at nine locations along the Waikato River for the previous 10 years.
  - Continuous monitoring (*Appendix II*).
    - Plots of the Hamilton and Tuakau sites during 2021 showing the level of diurnal and seasonal variation of selected parameters.
  - Water quality criteria (*Appendix III*)
    - Identifying the water quality parameters, guidelines, standards, and analytical methods used in the Waikato River water quality monitoring programme.

## 1.3 Water Quality Guidelines and Standards

Physical, chemical and biological parameters for water quality standards and guidelines used to assess the condition of the Waikato River are in table 1. The standards relate to the protection of the ecological health of rivers and streams and whether they are suitable for water-based recreation. Some water quality guidelines and standards are relevant to the use of the Waikato River for both general water supply (industrial/cooling water, irrigation, stock water etc.) and as a source of municipal drinking water. In most cases two criteria are shown. The less stringent criteria identify water that is satisfactory for the desired use; these are mostly based on existing national and other guidelines and standards (Appendix III). The more stringent criteria identify excellent water and reflect expert opinion. Samples gathered in 2021 whose results do not comply with the “satisfactory” criteria (Table 1) are underlined in raw data summaries (Table 6).

Adoption of updated water guidelines within council is currently under review, including the National Policy Statement for Freshwater Management 2020 (NPSFM) and updated ANZECC (2018) guidelines.

Table 1: Guidelines and standards of water quality for ecological health and for human uses of water

Water quality measure	Relevance <sup>1</sup>	Satisfactory	Excellent
<b>Ecological health</b>			
Dissolved Oxygen (% sat.)	aquatic life (breathing)	>80	>90
Dissolved Oxygen (mg/L)	aquatic life (stress)	>5	>8
pH	aquatic life (acidity)	6.5-9	7-8
Turbidity (NTU)	plant life (clarity)	<5	<2
Ammoniacal Nitrogen (g/m <sup>3</sup> )	aquatic life (toxicity)	<0.88	<0.1
Water Temperature (°C)(May-Sep) (Oct-Apr)	fish spawning fish health	<12 <20	<10 <16
Total Phosphorus (g/m <sup>3</sup> )	nuisance plant growth	<0.04	<0.01
Total Nitrogen (g/m <sup>3</sup> )	nuisance plant growth	<0.5	<0.1
<b>Human uses - recreation</b>			
Black Disk (m)	visibility	>1.6	>4
<i>Escherichia coli</i> (/100ml)	human health	<550	<55
Median <i>Escherichia coli</i> (/100ml)	human health	<126	<23
<b>Human uses - water supply</b>			
Chlorophyll <i>a</i> (g/m <sup>3</sup> )	filter blockage	<0.02	<0.005
<b>Human uses - drinking water</b>			
Arsenic (g/m <sup>3</sup> )	human health (toxicity)	<0.01	n/a
Boron (g/m <sup>3</sup> )	human health (toxicity)	<1.4	n/a

<sup>1</sup>Refer to Appendix III for description of guideline and standards values used. These guidelines and standards are also defined on the Waikato Regional Council website: [www.waikatoregion.govt.nz/guidelines](http://www.waikatoregion.govt.nz/guidelines)

## 2 The Waikato River Monitoring Programme Design

### 2.1 Sampling Collection

Sample collection occurs over two days each month. Locations in the upper catchment from Taupo to Waipapa are visited as part of the first run, and locations in the middle and lower catchments from Karapiro (at the Karapiro tailrace) to Tuakau are visited on the next. Each location is sampled at a similar time on each occasion (coefficient of variation  $\approx 2\text{--}6\%$ ) to minimise the effect of diurnal variation on the measurement of water quality parameters. Sample times are recorded in New Zealand Standard Time (NZST). Ten sites have one month of sampling missed and two sites have two months of sampling missing due to Covid 19 related restrictions and/or issues.

### 2.2 Sample Locations

Routine water quality monitoring locations of the Waikato River Monitoring Programme illustrated in *Figure 1* and summarised in *Table 2*.

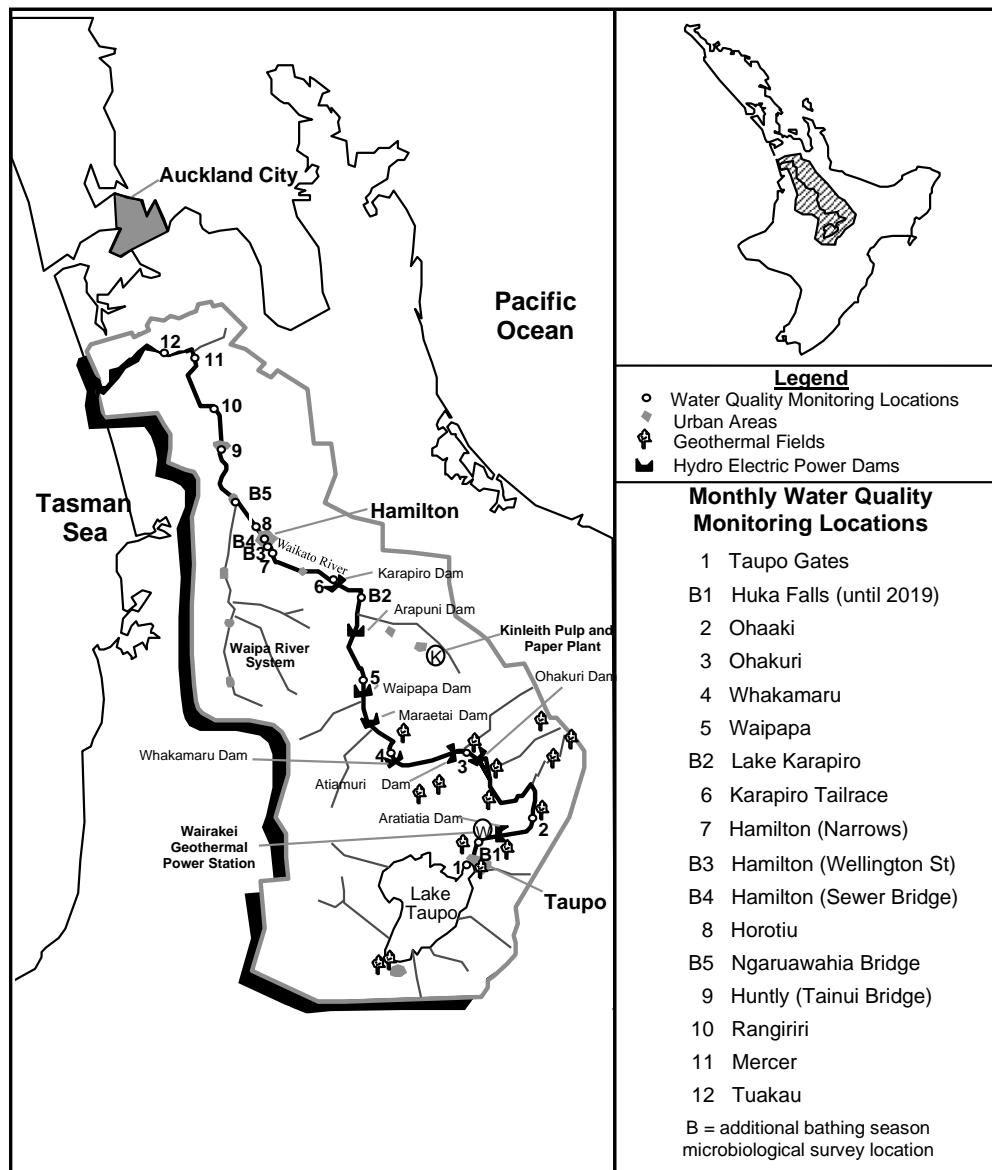

Figure 1: Waikato River water quality monitoring locations

The following twelve locations along the river Taupo, Ohaaki, Ohakuri, Whakamaru, Waipapa, Karapiro, Hamilton-Narrows, Hamilton-Horotiu, Huntly, Rangiriri, Mercer and Tuakau are assessed. Ohakuri Bridge's black disk and Munsell colour parameter values are measured at the Ohakuri boat ramp in the recreation reserve immediately upstream of the dam but for the purpose of this report will be reported as Ohakuri Bridge. There are no black disk measurements at the Taupo site due to lack of safe access to rivers edge. Additional locations are included for the summer intensive microbiological survey (*Figure 1*), the results of which are reported to LAWA for public access. The major tributaries that enter the Waikato River are also monitored monthly as part of the Regional River Monitoring Programme (ReRiMP).

Table 2: Routine water quality monitoring sites

Location number	Distance <sup>1</sup> (km)	Location	Location coordinate (NZTM)
1131-127	0.1	Taupo Control Gates	1867049, 5714142
1131-105	36.5	Ohaaki Bridge	1887985, 5729892
1131-107	75.8	Ohakuri Tailrace Bridge	1869480, 5744515
1131-147	105	Whakamaru Tailrace	1845004, 5743996
1131-143	126.1	Waipapa Tailrace	1834859, 5759095
1131-79	179.3	Karapiro Tailrace	1823187, 5799700
1131-328	202.2	Hamilton – Narrows	1806588, 5809381
1131-64 <sup>d</sup>	211.5	Hamilton – Traffic Bridge	1801620, 5814821
1131-69	225.6	Horotiu Bridge	1794554, 5825430
1131-77	246.5	Huntly – Tainui Bridge	1790260, 5840128
1131-117	262.3	Rangiriri Bridge	1788389, 5855059
1131-91	286.3	Mercer Bridge	1781445, 5871961
1131-133	296.8	Tuakau Bridge	1772410, 5870516
1131-131 <sup>d</sup>	306.5	Tuakau – Elbows Landing at NZ Steel Ltd pumping station	1764150, 5873515

<sup>1</sup> approximate distance (in kilometres) from Lake Taupo outlet.

<sup>d</sup> datasonde deployment sites

## **2.3 Water Quality Parameters**

Water quality of the Waikato River is assessed by measuring more than 40 parameters (30 routinely). A collection of parameters is measured in the field and the remainder are analysed in a laboratory using standard analytical methods. Details of field measurements and analytical methods used are included in *Appendix III*.

# **3 Quality Control, Data Storage and Analysis**

Quality control measures are undertaken in accordance with Waikato Regional Council's standards including procedures for the collection, transport, storage of samples, and methods for data verification and quality assurance to ensure the consistency of data across the programme. Samples are sent to IANZ registered laboratories for analysis. Back-up samples are held for two weeks until results have been verified by routine quality assurance procedures. All data from field measurements and laboratory analyses are stored in Waikato Regional Council's database, called WISKI.

Data analysis in this report was performed using WQ Stats 2.2 program. For the purpose of data analysis, non-detect results (i.e., results with "less than" values) were assumed to be equal to half the corresponding limit of detection (i.e.,  $< x = x/2$ ) except bacteria values, and results greater than the value reported were taken as equal to the value reported (i.e.,  $> x = x$ ).

## **3.1 Reports**

Waikato Regional Council Technical Report 2018/30, Trends in River Water Quality in the Waikato Region, 1993–2017 (Vant, 2018) outlines the trends in the Waikato River and other rivers in the region. Copies are available in electronic format from the following link:

[Trends in river water quality in the Waikato region, 1993–2017 | Waikato Regional Council](#)

The data contained in these Waikato River reports is updated to the Waikato Regional Council website linked below:

[Waikato River | Waikato Regional Council](#)

This data is also supplied to the LAWA website:

<https://www.lawa.org.nz/explore-data/waikato-region>

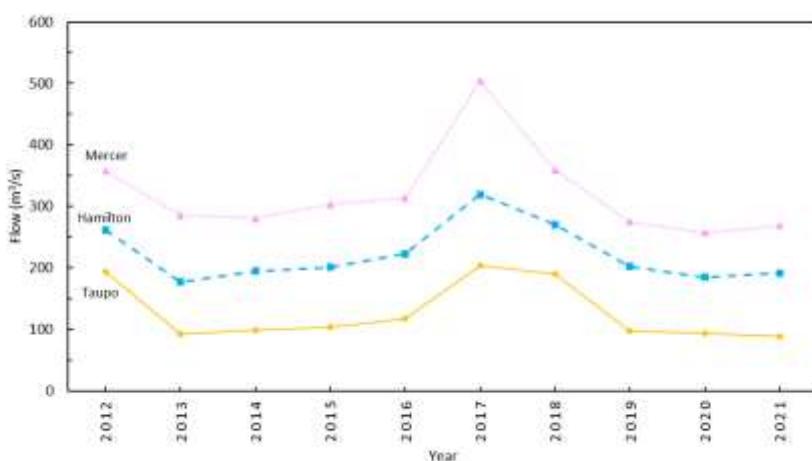

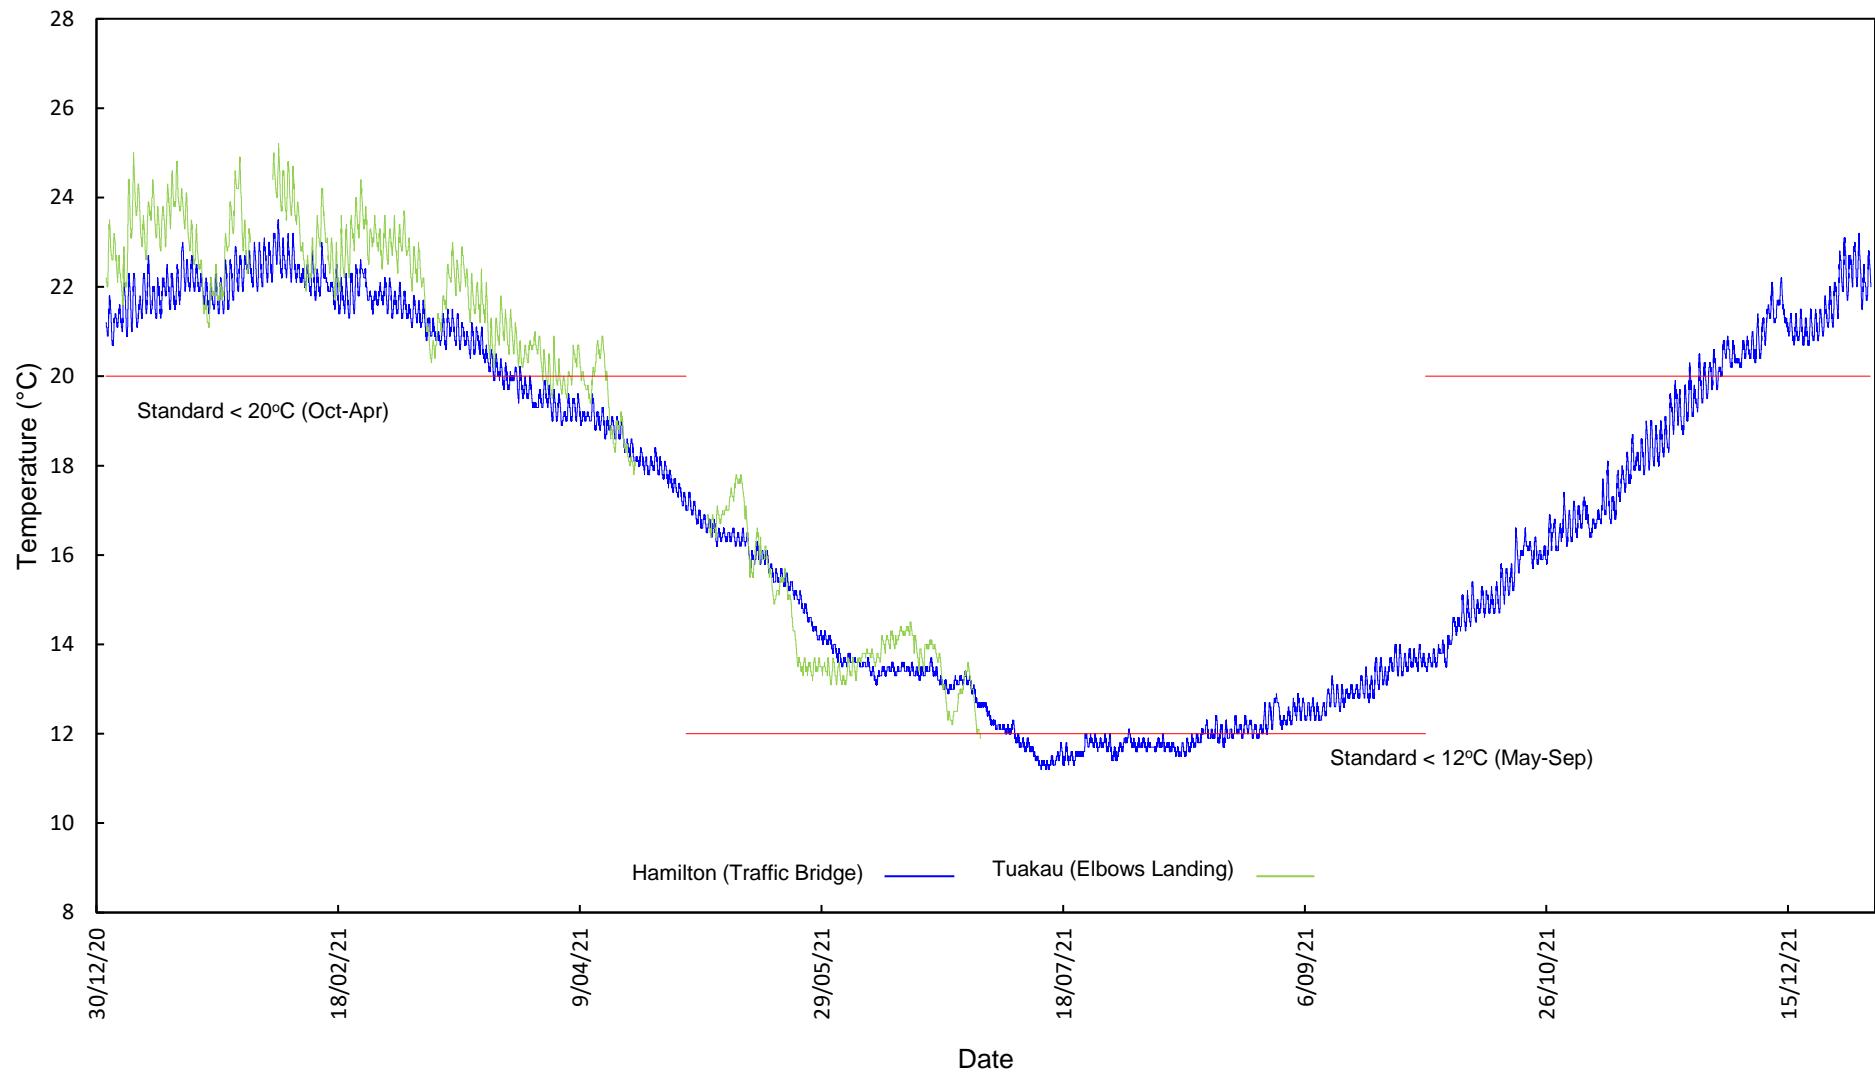

Figure 4: Yearly flow record (median) at Taupo, Hamilton and Mercer for 2012-2021

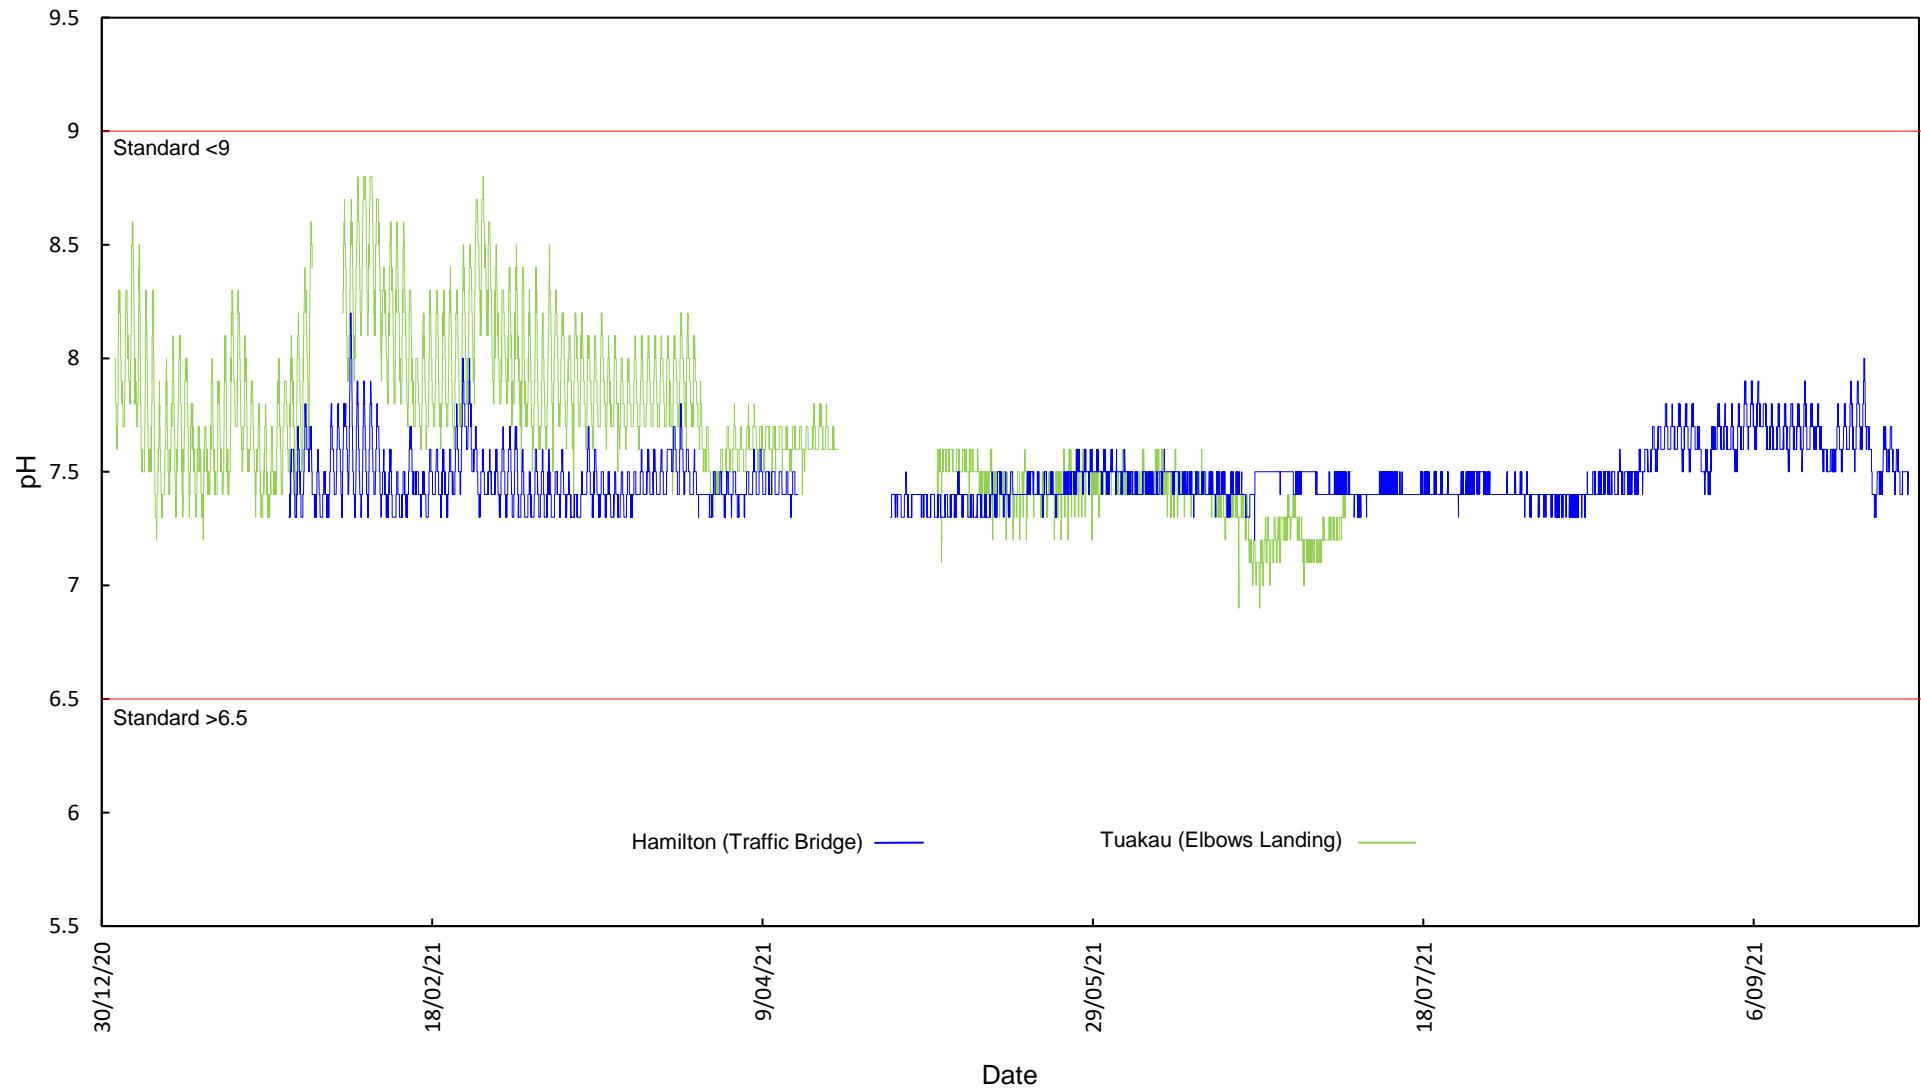

## **Appendix II**

### **Datasonde Deployments Graphs: Selected Water Quality Parameters**

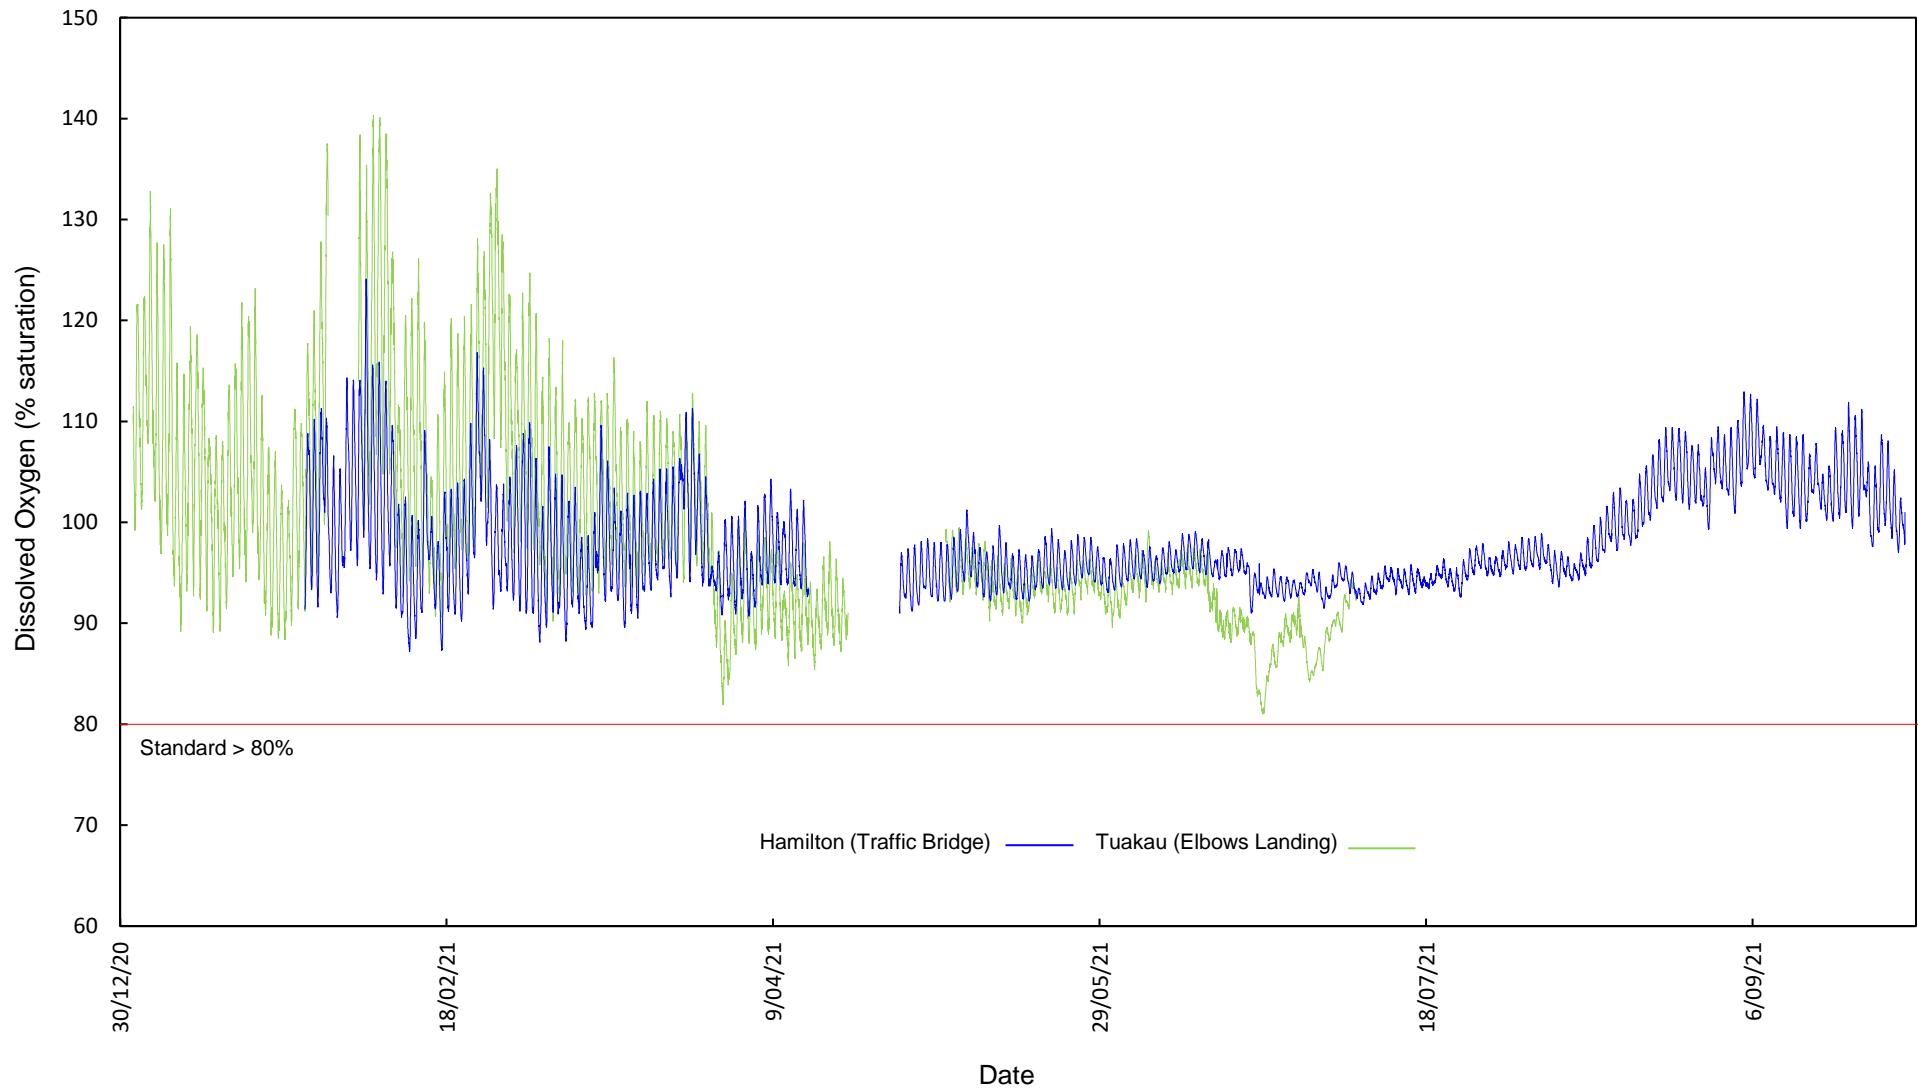

### Water Temperature: Lower Waikato (2021)

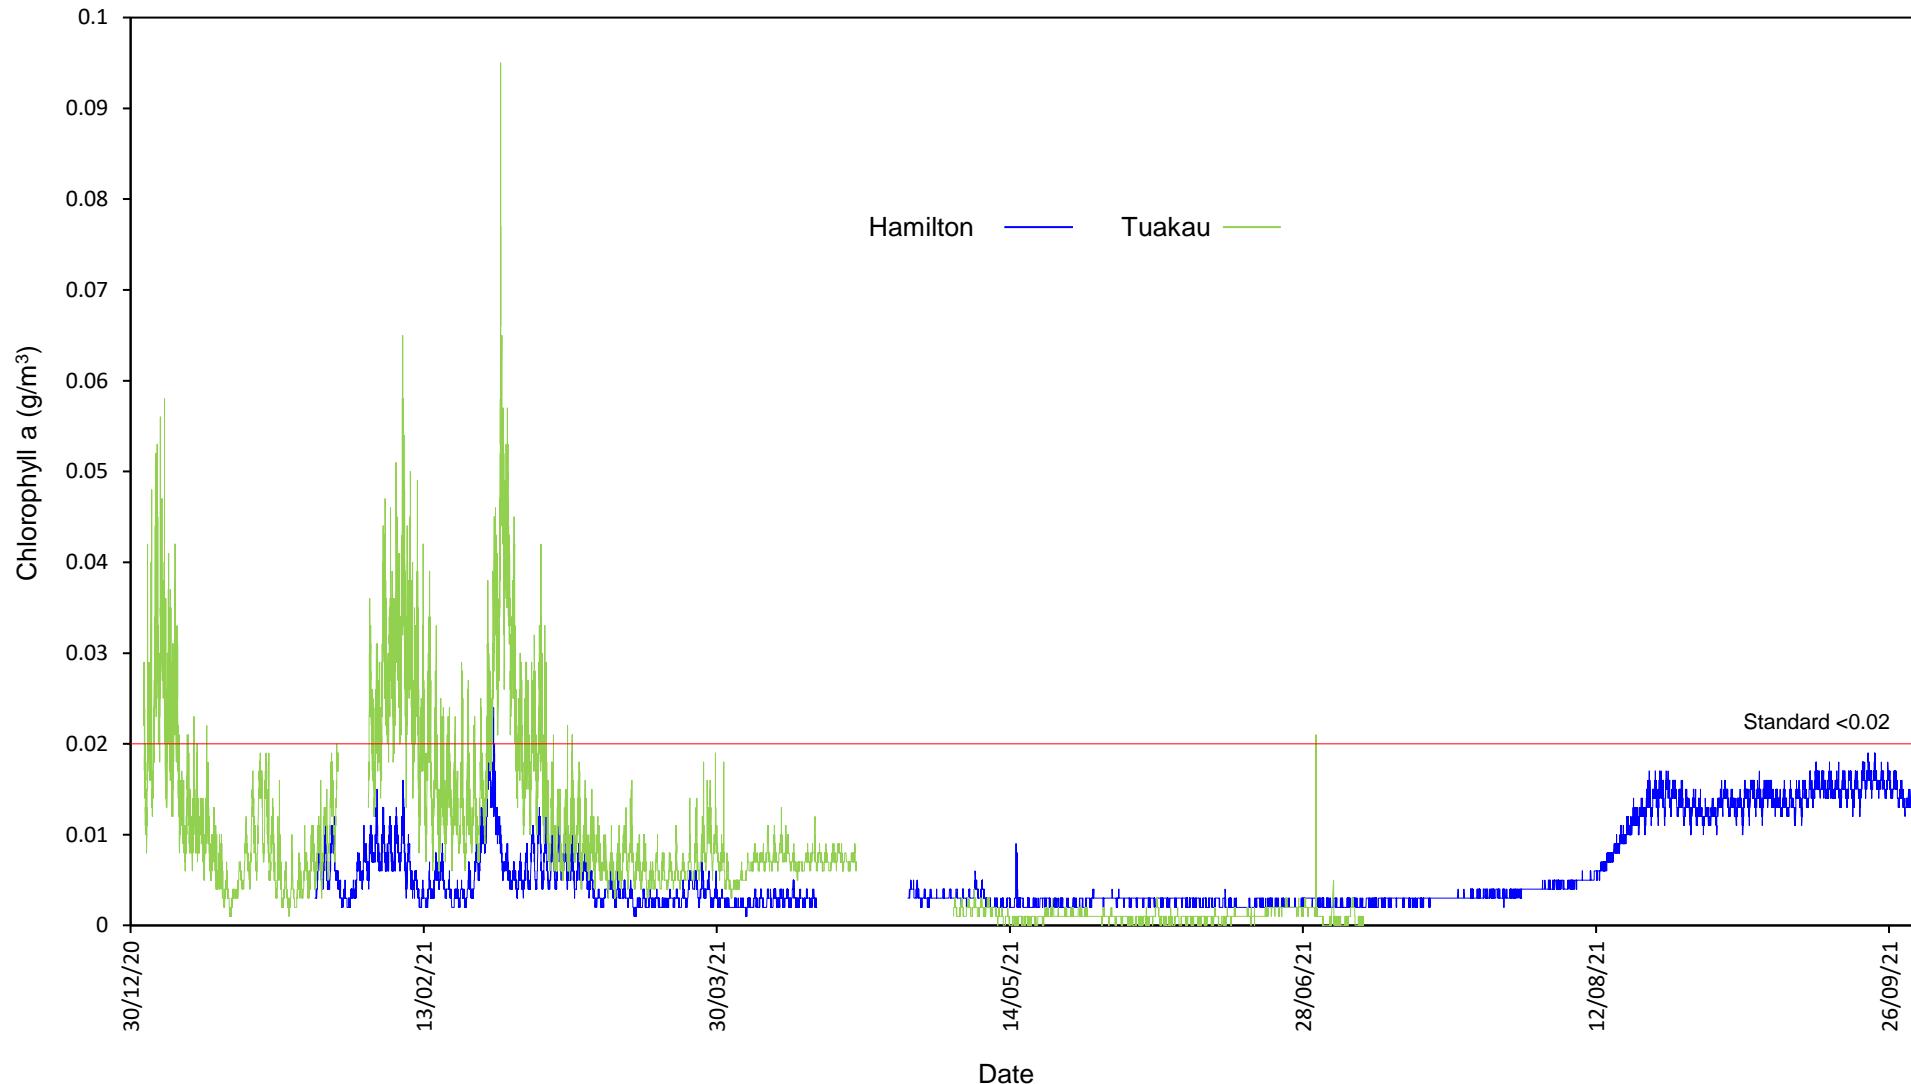

## pH: Lower Waikato (2021)

### Dissolved Oxygen (% saturation): Lower Waikato (2021)

### Chlorophyll a: Lower Waikato (2021)

# Appendix III

## Waikato River Water Quality Parameters

Water quality parameter	Reason for monitoring	Parameter monitored <sup>1</sup>	Comments <sup>2</sup>
<b>Dissolved oxygen</b>	- requirement for aquatic life - indicator of organic pollution - indicator of photosynthesis (plant growth)	DO (conc.) DO (%sat.)	routine (field) routine (field)
<b>Temperature</b>	- indicator of biological activity - requirement for aquatic life - mixing processes - modelling studies (e.g. nutrient uptake)	Temperature	routine (field)
<b>Conductivity</b>	- indicator of total salts dissolved in water - indicator for geothermal input	Conductivity TDS	routine routine
<b>pH</b>	- aquatic life protection - indicator of industrial discharges, mining	pH	routine
<b>Clarity</b> - <b>turbidity</b> - <b>black disk</b> (visual clarity)	- aesthetic appearance - light availability for excessive plant growth - aquatic life protection - indicator of catchment condition, land use	Turbidity Black disk	routine routine (field)
<b>Colour</b> - <b>light absorption</b>	- aesthetic appearance - light availability for excessive plant growth - indicator of presence of organic matter	Munsell colour Absorbance at: 340,440,780nm	routine (field) routine
<b>Nutrients (N and P)</b> <b>chlorophyll <math>\alpha</math></b>	- enrichment, excessive plant growth - nutrient limitation for plant/algal growth	NO <sub>3</sub> -N+NO <sub>2</sub> -N NH <sub>4</sub> -N,TKN DRP, TP, Chl $\alpha$	routine
<b>Geothermal contaminants</b>	- indicators of geothermal inflows - aquatic life protection (ecotoxicity) - drinking water (human health aspects)	Cl, Li, B, As	routine
<b>Organic carbon</b>	- indicator of organic pollution - catchment characteristics	BOD <sub>5</sub> TOC/DOC	routine routine
<b>Faecal bacteria</b> - <b>E. coli</b> - <b>enterococci</b> - <b>faecal coliforms</b>	- indicator of pollution with faecal matter - disease risk for swimming etc.	E. Coli ENT FC	routine routine routine

<sup>1</sup> see last page of Appendix III for the meaning of the abbreviations.

<sup>2</sup> routine means sampled monthly.

# Guidelines and Standards

Parameter	Critical value(s)	Source
Dissolved oxygen	>80% of saturation concentration	RMA Third Schedule, Classes AE, F, and FS.
Dissolved oxygen	>4.0 mg/L 1-day minimum*	National Policy Statement for Freshwater Management 2020, Appendix 2B, Table 17.
Dissolved oxygen	>5.0 mg/L 7-day mean minimum*	National Policy Statement for Freshwater Management 2020, Appendix 2B, Table 17.
pH	6.5–9	ANZECC. (2000). Australia and New Zealand Guidelines for Fresh and Marine Water Quality. Australian and New Zealand Environment and Conservation Council. Agriculture and Resource Management Council of Australia and New Zealand. ISBN 09578245 0 5.
Turbidity	<5 NTU	Studies of adverse effects on underwater light—and thus on plant and invertebrate production—in certain South Island streams (Davies-Colley 1991).
Ammoniacal-nitrogen	<0.88 g/m <sup>3</sup>	USEPA (1998) value for 1-hour exposure at pH 9.
Temperature	<12°C (May – Sep) <20°C (Oct – Apr)	Waikato Regional Council Proposed Regional Plan standards for trout fisheries and trout spawning (1998).
Total phosphorus	<0.04 g/m <sup>3</sup>	From upper quartile values for 77 New Zealand rivers in NIWA's National Water Quality Network (after Smith & Maasdam 1994)—note that the guidelines for “excellent” conditions are the lower quartile concentrations for these rivers.
Total nitrogen	<0.5 g/m <sup>3</sup>	From upper quartile values for 77 New Zealand rivers in NIWA's National Water Quality Network (after Smith & Maasdam 1994)—note that the guidelines for “excellent” conditions are the lower quartile concentrations for these rivers.
Water clarity at baseflow	>1.6 m	“Baseflow” defined as flows less than the upper decile flow. Guideline from Ministry for the Environment (1994).
<i>Escherichia coli</i>	<550/100 mL	Ministry for the Environment (2003) guidelines for the management of recreational and marine shellfish-gathering waters.
Median <i>Escherichia coli</i>	<126/100 mL	Ministry for the Environment (1999) guidelines for the management of recreational and marine shellfish-gathering waters.
Enterococci	<77/100 mL	Department of Health (1992) guidelines for “moderate” level of recreational use.
Chlorophyll <i>a</i>	<0.02 g/m <sup>3</sup>	Ministry for the Environment (1992).
Arsenic	<0.01 g/m <sup>3</sup>	Ministry of Health (2018).
Boron	<1.4 g/m <sup>3</sup>	Ministry of Health (2018).

\*critical values are based on continuous data

# Analytical Methods

Id <sup>1</sup>	Parameter	Short name <sup>2</sup>	Method
A340F	Absorbance (340nm)	A340F	Spectrophotometer, 1 cm path length, APHA method 5910B
A440F	Absorbance (440nm)	A440F	Spectrophotometer, 1 cm path length, APHA method 5910B
A780F	Absorbance (780nm)	A440F	Spectrophotometer, 1 cm path length, APHA method 5910B
Arsenic	Arsenic	As	Nitric acid digestion, ICP-MS, APHA method 3125 B / USEPA 200B, uses Tt or TR if Tr not available or average if both available
BDisk	Black Disk	BDisk	Field measurement, horizontal water transparency (20mm, 60mm, 100mm, 200mm disk) in river or trough (20mm only)
BOD5Dil	Biochemical Oxygen Demand 5 day	BOD-5d	Incubation 5 days at 20°C, DO-meter, No nitrification inhibitor added, unseeded, APHA method 5210 B
Boron	Boron	B	ICP-MS, APHA method 3125 B. Uses either TR or Tt or average if both available
CHLA	Chlorophyll <i>a</i>	CHL <sub>a</sub>	Acetone extraction. Spectroscopy. APHA method 10200 H (modified)
Cl Diss	Chloride Dissolved	CL	Filtered sample. Ferric thiocyanate colorimetry, Discrete analyser. APHA method 4500 Cl <sup>-</sup> E (modified)
Colour Munsell	Colour (Munsell)	Colour	Field measurement, Munsell colour patches
DO	Dissolved Oxygen	DO	Field measurement (Hach DO meter, model HQ 30d)
DO_Percent	Dissolved Oxygen	DO%	Field measurement (Hach DO meter, model HQ 30d)
DOC	Dissolved Organic Carbon	DOC	Filtration, acidification, purging to remove inorganic C, persulphate oxidation, IR detection. APHA method 5310 C (modified)
DRP	Dissolved Reactive Phosphorus	DRP	Filtration, Molybdenum Blue Colorimetry. Discrete analyser. APHA 4500 PE (modified)
EC25	Conductivity at 25°C	Cond	ab Meter @ 25°C. APHA method 2510B
EColi	<i>Escherichia coli</i>	<i>E coli</i>	Membrane Filtration (mFC Agar) confirmation by MUG Agar. APHA method 9222 G
ENT	Enterococci	ENT.	Membrane Filtration (mE Agar) confirmation by EIA Agar. APHA method 9230 C
FColi	Faecal Coliforms	F colo	Membrane Filtration (mFC Agar). APHA method 9222 D
Li	Lithium	Li	ICP-MS, method APHA 3125 B
NH4	Ammoniacal Nitrogen	NH <sub>4</sub> N	Filtration, Phenol/Hypochlorite Colorimetry. Discrete analyser. APHA method 4500-NH3 F (modified).
NitriteNitrogen	Nitrite Nitrogen	NO <sub>2</sub> -N	Automated azo dye colorimetry. Flow injection analyser. APHA 4500-NO2 I.
NNN	Nitrate/Nitrite Nitrogen	NNN	Automated Cadmium reduction. Flow injection analyser. APHA method 4500 - NO3-I (modified).
pH	pH	pH	Lab Meter @ 25°C. APHA method 4500-H <sup>+</sup> B
TDSMisc	Total Dissolved Solids	TDS	Filtration, gravimetric. APHA 2540 C (modified)
TKN	Total Kjeldahl Nitrogen	TKN	Acid digestion. Phenol/Hypochlorite colorimetry. Discrete analyser. APHA method 4500-Norg D
TN	Total Nitrogen	TN	Calculated from NNN + TKN (Nitrite/Nitrate Nitrogen + Total Kjeldahl-Nitrogen)
TOC	Total Organic Carbon	TOC	Acidification, purging to remove inorganic C, persulphate oxidation, IR detection. APHA method 5310 C (modified)
TP	Total Phosphorus	TP	Acid persulphate digestion, Colorimetry. Discrete Analyser. APHA method 4500-P B E (modified). Also modified to include the use of reductant to eliminate interference from arsenic present in the sample. NAWASCA Pub 38, 1982
Turb_NTU	Turbidity	Turb	Turbidity Meter Hach 2100N. APHA method 2130 B
WT	Water Temperature	Temp	Field measurement (Hach DO meter, model HQ 30d)

<sup>1</sup>Water quality parameter identification code refers to Waikato Regional Council's water quality database (WISKI) parameter short name.

<sup>2</sup>Water quality parameter short name used in this report.
