Date September 2021

### **Disclaimer**

This technical report has been prepared for the use of Waikato Regional Council as a reference document and as such does not constitute Council's policy.

Council requests that if excerpts or inferences are drawn from this document for further use by individuals or organisations, due care should be taken to ensure that the appropriate context has been preserved and is accurately reflected and referenced in any subsequent spoken or written communication.

While Waikato Regional Council has exercised all reasonable skill and care in controlling the contents of this report, Council accepts no liability in contract, tort or otherwise, for any loss, damage, injury or expense (whether direct, indirect or consequential) arising out of the provision of this information or its use by you or any other party.

# Acknowledgement

Thanks to Alicia Williams, Aroha Salu, Asaeli Tulagi, Brett Taylor, Briar Mills, Chris McKinnon, Debbie Eastwood, Georgia Clements, Mark Hamer, Nicole Squires, Noel Bates, and Shana Edgecombe for their commitment and reliability in undertaking field measurements and sample collection, as well as Aroha Salu and Chris McKinnon for co-ordination of the field aspects of sample collection. Thanks to Keita Kirchin for assisting with the report formatting.

Hydrological flow data were provided by Mercury Energy (Hydro Lakes, Waiotapu stream and Waikato River at Reids Farm), Contact Energy (Ohaaki Bridge) and Genesis Power (Huntly) through agents Opus and NIWA. The Environmental Monitoring Programme, Waikato Regional Council, Hamilton provided hydrological flow data for two sites.

# 1 Introduction

## 1.1 Background

This report covers the calendar year of 2020 and follows the format of the previous data report (Bates & Tulagi, 2019).

To effectively manage water quality, the Waikato River monitoring programme addresses the following questions:

1. What is the quality of the water now?
2. Why is the water of the observed level of quality?
3. Is water quality getting better or worse? If so - what makes it change?
4. How can we improve the quality, ecological health and integrity of the Waikato River?

The monitoring information allows the Council to:

- determine compliance with classification standards
- define the suitability of the resource for various beneficial uses and values of the water
- monitor the impact of major discrete point source discharges on water quality
- monitor the impacts of diffuse discharges on water quality
- provide a basis for evaluating the effectiveness of resource management measures.

This dataset is invaluable for the evaluation of the Waikato River: its state, the pressures on it, and its response to these pressures. We need to continue to gather comprehensive, reliable, and good quality data on the Waikato River to protect and enhance its values into the future.

This report is the 30<sup>th</sup> since the re-design of the Waikato River Monitoring Programme (WaRiMP) implemented in 1989. Copies of reports can be obtained via the Waikato Regional Council Internet site <http://www.waikatoregion.govt.nz/Publications/> or by contacting Waikato Regional Council (the Library) on 0800 800 401 and filling out the request for service form at: [www.waikatoregion.govt.nz/request](http://www.waikatoregion.govt.nz/request).

## 1.2 Report content

The report provides information on:

1. Routine monthly monitoring of water quality at 12 sites:
  - Year 2020 summary data tabulated by parameter for each location and reported with the median of the previous 5 years.
  - Key parameter graphs showing the average water quality for 2020 at each location, compared to results of the previous 5 years.
  - Summary tables identifying the number of samples meeting 'satisfactory' and 'excellent' water quality standards and guidelines.
  - Raw data for 2020.
2. Additional information is provided in the appendices on:
  - Flow (*Appendix I*).
    - The effect of flow is important to assessing water quality and making comparisons between years. Appendix I provides information on annual median flow at some locations for the previous 10 years.
  - Continuous monitoring data via Datasonde (*Appendix II*).
    - Plots of the Hamilton and Tuakau deployments undertaken during 2020 showing the level of diurnal and seasonal variation of selected parameters.
  - Water quality criteria (*Appendix III*)
    - Identifying the water quality parameters, guidelines, standards, and analytical methods used in the Waikato River water quality monitoring programme.

## 1.3 Water quality guidelines and standards

Table 1 lists the physical and chemical water quality standards and guidelines used to assess the condition of the Waikato River in 2020. The standards mainly relate to either the protection of ecological health of rivers and streams or to whether they are suitable for water-based recreation, especially swimming.

Some water quality guidelines and standards are relevant to the use of the Waikato River for both general water supply (industrial/cooling water, irrigation, stock water etc.) and as a source of municipal drinking water. In most cases two criteria are shown. The less stringent criteria define water that is “satisfactory” for the desired use; these are mostly based on existing national and other guidelines and standards (Appendix III). The more stringent criteria identify “excellent” water and reflect expert opinion. Samples gathered in 2020 whose results do not comply with the “satisfactory” criteria (Table 1) are underlined in raw data summaries.

Adoption of updated water guidelines within council is currently under review, including the National Policy Statement for Freshwater Management 2017 (NPSFM) and updated ANZECC (2018) guidelines.

**Table 1: Guidelines and standards for physiochemical water quality for ecological health and for human uses of water**

| Water quality measure                        | Relevance <sup>1</sup>         | Satisfactory | Excellent  |
|--|--------------------------------|--------------|------------|
| <b>Ecological health</b>                     |                                |              |            |
| Dissolved Oxygen (% sat.)                    | aquatic life (breathing)       | >80          | >90        |
| Dissolved Oxygen (mg/L)                      | aquatic life (stress)          | >5           | >8         |
| pH   | aquatic life (acidity)         | 6.5-9        | 7-8        |

| Ammoniacal Nitrogen (g/m <sup>3</sup> )      | aquatic life (toxicity)        | <0.88        | <0.1       |
| Water Temperature (°C)(May-Sep)<br>(Oct-Apr) | fish (spawning)<br>fish health | <12<br><20   | <10<br><16 |
| Total Phosphorus (g/m <sup>3</sup> )         | nuisance plant growth          | <0.04        | <0.01      |
| Total Nitrogen (g/m <sup>3</sup> )           | nuisance plant growth          | <0.5         | <0.1       |
| <b>Human uses - recreation</b>               |                                |              |            |
| Black Disk (m)                               | visibility                     | >1.6         | >4         |
| <i>Escherichia coli</i> (/100ml)             | human health                   | <550         | <55        |
| Median <i>Escherichia coli</i> (/100ml)      | human health                   | <126         | <23        |
| <b>Human uses - water supply</b>             |                                |              |            |
| Chlorophyll <i>a</i> (g/m <sup>3</sup> )     | filter blockage                | <0.02        | <0.005     |
| <b>Human uses - drinking water</b>           |                                |              |            |
| Arsenic (g/m <sup>3</sup> )                  | human health (toxicity)        | <0.01        | -          |
| Boron (g/m <sup>3</sup> )                    | human health (toxicity)        | <1.4         | -          |

<sup>1</sup>Refer to Appendix III for description of guideline and standards values used. These guidelines and standards are also defined on the Waikato Regional Council Internet site; [www.waikatoregion.govt.nz/guidelines](http://www.waikatoregion.govt.nz/guidelines)

## 2 The Waikato River monitoring programme design

### 2.1 Sampling collection

Sample collection occurs monthly, as two sampling runs. Locations in the upper catchment from Taupo to Waipapa are visited as part of the first run, and locations in the middle and lower catchments from Karapiro (at the Karapiro tailrace) to Tuakau are visited on the next. Each location is sampled at a similar time on each occasion (coefficient of variation  $\approx 2\text{--}6\%$ ) to minimise the effect of diurnal variation on the measurement of water quality parameters. Sample times are recorded in New Zealand Standard Time (NZST). Because of the controlled nature of the river, the daytime samples are generally collected at higher than median flows. One month of data was missed due to Covid-19 lockdown measures (April 2020).

### 2.2 Sample locations

Routine water quality monitoring locations of the Waikato River Monitoring Programme and additional locations used during the summer microbiological surveys are illustrated in *Figure 1* and summarised in *Table 2*.

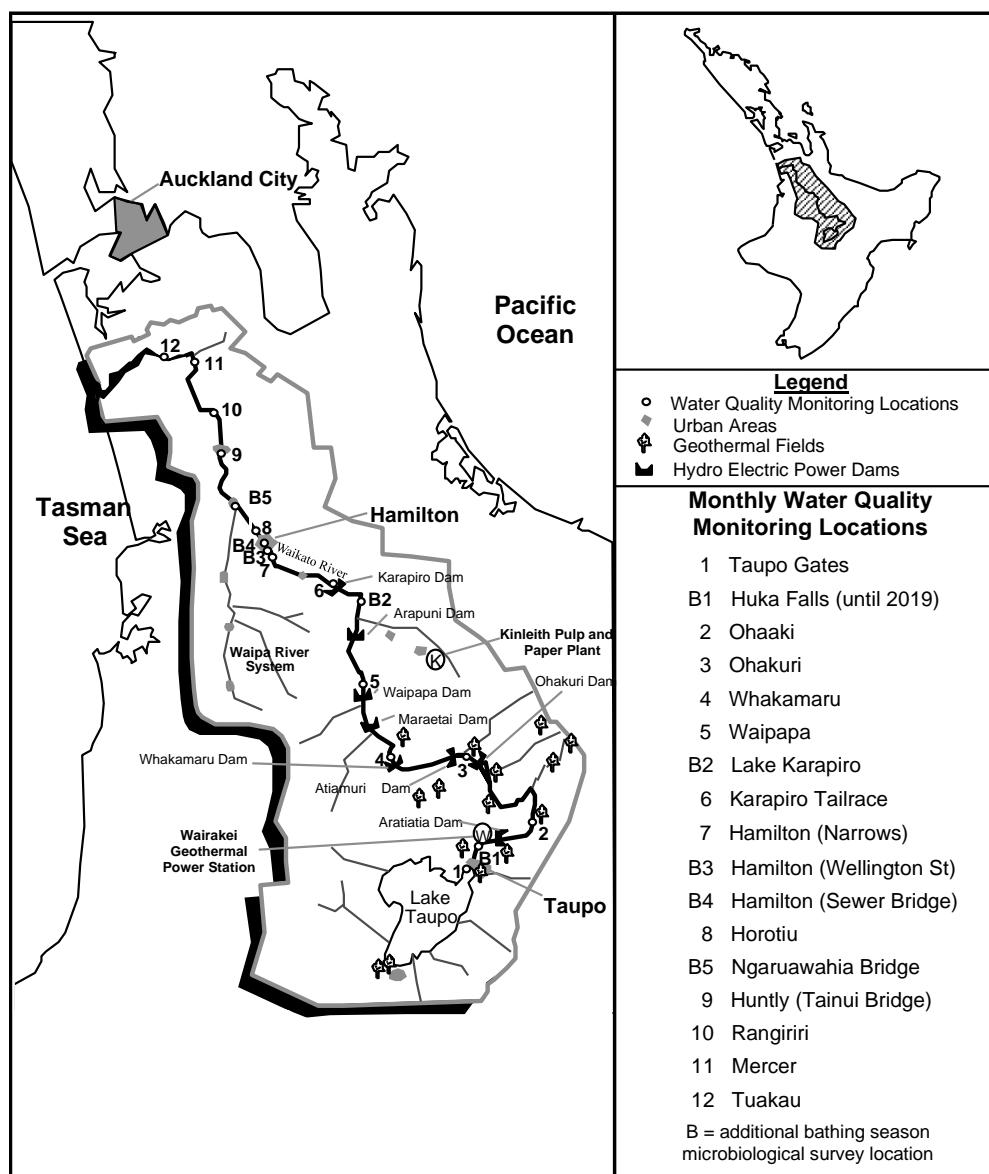

Figure 1: Waikato River water quality monitoring locations

Twelve locations along the river are visited monthly (Taupo, Ohaaki, Ohakuri, Whakamaru, Waipapa, Karapiro, Hamilton-Narrows, Hamilton-Horotiu, Huntly, Rangiriri, Mercer and Tuakau). An additional four locations are included for the summer intensive microbiological survey (*see Figure 1 and Table 2*), the results of which are reported to LAWA for public access. The major tributaries that enter the Waikato River are also monitored monthly as part of the Regional River Monitoring Programme (ReRiMP) initiated in 1993 (Huser and Wilson, 1996b).

**Table 2: Routine sampling and bathing beach water quality monitoring sites**

| Location number        | Distance <sup>1</sup> (km) | Location name   | Location coordinate (NZTM) |
|------------------------|----------------------------|---|----------------------------|
| 1131-127               | 0.1                        | Taupo Gates   | 1867049, 5714142           |
| 1131-105 <sup>d</sup>  | 36.5                       | Ohaaki Bridge at bridge, true right bank                | 1887985, 5729892           |
| 1131-107               | 75.8                       | Ohakuri Tailrace Bridge <sup>3</sup>                    | 1869480, 5744515           |
| 1131-147               | 105                        | Whakamaru Tailrace at boat ramp <sup>4</sup>            | 1845004, 5743996           |
| 1131-143               | 126.1                      | Waipapa Tailrace at boat ramp <sup>5</sup>              | 1834859, 5759095           |
| 1131-81 <sup>b</sup>   | 166.7                      | Lake Karapiro Boat Ramp at Horahora domain              | 1833397, 5795413           |
| 1131-79                | 179.3                      | Karapiro Tailrace, true right bank                      | 1823187, 5799700           |
| 1131-328               | 202.2                      | Hamilton – Narrows at boat ramp <sup>6</sup>            | 1806588, 5809381           |
| 1131-145 <sup>*b</sup> | 210.8                      | Hamilton – Wellington St Bch at jetty, true right bank  | 1801658, 5814272           |
| 1131-64 <sup>d</sup>   | 211.5                      | Hamilton – Traffic Bridge true right bank               | 1801620, 5814821           |
| 1131-69                | 225.6                      | Horotiu Bridge d/s of bridge                            | 1794554, 5825430           |
| 1131-102 <sup>b</sup>  | 232.3                      | Ngaruawahia Bridge u/s of confluence <sup>7</sup>       | 1789439, 5829455           |
| 1131-77                | 246.5                      | Huntly – Tainui Bridge true left bank                   | 1790260, 5840128           |
| 1131-117 <sup>*d</sup> | 262.3                      | Rangiriri Bridge true right bank                        | 1788389, 5855059           |
| 1131-91                | 286.3                      | Mercer Bridge   | 1781445, 5871961           |
| 1131-133               | 296.8                      | Tuakau Bridge at boat ramp <sup>8</sup>                 | 1772410, 5870516           |
| 1131-131 <sup>d</sup>  | 306.5                      | Tuakau – Elbows Landing at NZ Steel Ltd pumping station | 1764150, 5873515           |

<sup>1</sup> approximate distance (in kilometres) from Lake Taupo's outlet.

<sup>2</sup> river boat jetty and boat ramp, true left bank, about 1.8 km downstream of Huka Falls

<sup>3</sup> boat ramp in recreation reserve immediately upstream from dam (true left bank).

<sup>4</sup> boat ramp at Whakamaru Power Station.

<sup>5</sup> river access d/s of Lake Waipapa, about 500 m off S.H. 32 along a gravel road (true left bank).

<sup>6</sup> boat ramp accessed via Narrows Lane (true right bank)

<sup>7</sup> road bridge upstream of Waipa River confluence.

<sup>8</sup> immediately d/s of bridge, at Reserve (true right bank).

<sup>b</sup> bathing season intensive microbiological survey locations only – survey conducted over the 2019/20 summer.

<sup>d</sup> datasonde deployment sites.

\* locations at Taupo (Taupo Bungy, 2 km d/s from Taupo Gates), at Hamilton (Wellington Street jetty) and at Rangiriri (Rangiriri Bridge) are sampled and reported as part of the National River Water Quality Network undertaken by NIWA. Contact person: Mike Crump, NIWA, Hamilton.

+ logistic considerations mean field measurements are often made at slightly different locations from sample collection (e.g. sampling from bridges).

## **2.3 Water quality parameters**

Water quality of the Waikato River is assessed by measuring up to 40 parameters (27 routinely). Some parameters are measured in the field but the majority of them are analysed in a laboratory using standard analytical methods. Details of field measurements and analytical methods used are included in *Appendix III*.

## **2.4 Quality control, data storage and analysis**

Quality control measures are undertaken in accordance with Waikato Regional Council's standards including procedures for the collection, transport, storage of samples, and methods for data verification and quality assurance to ensure the consistency of data across the programme. Samples are sent to IANZ registered laboratories for analysis. Back-up samples are held for two months until results have been verified by routine quality assurance procedures. All data from field measurements and laboratory analyses are stored in Waikato Regional Council's database, called WISKI.

Data analysis was performed using WQStats program. For the purpose of data analysis, non-detect results (i.e. results with "less than" values) were assumed to be equal to half the corresponding limit of detection (i.e.  $< x = x/2$ ), and results greater than the value reported were taken as equal to the value reported (i.e.  $> x = x$ ).

## **2.5 Reports**

Waikato Regional Council Technical Report 2018/30, Trends in River Water Quality in the Waikato Region, 1993–2017 (Vant, 2018) outlines the trends in the Waikato River and other rivers in the region. Copies are available in electronic format from the publications page of the Waikato Regional Council website:

[Trends in river water quality in the Waikato region, 1993-2017 | Waikato Regional Council](#)

The data contained in these Waikato River reports is updated to the Waikato Regional Council "Waikato River" Internet page:

[Water quality monitoring - all rivers and streams | Waikato Regional Council](#)

The "How healthy are our rivers?" link provides details of the guidelines and standards used to assess the condition of the Waikato River and other rivers in the region. A link to water quality at other regional river monitoring sites is also available from this page.

This data is also supplied to the LAWA website:

<https://www.lawa.org.nz/explore-data/waikato-region>

### **3 Results**

#### **3.1 Waikato River monitoring programme**

##### **3.1.1 Routine water quality monitoring**

## Key parameter graphs

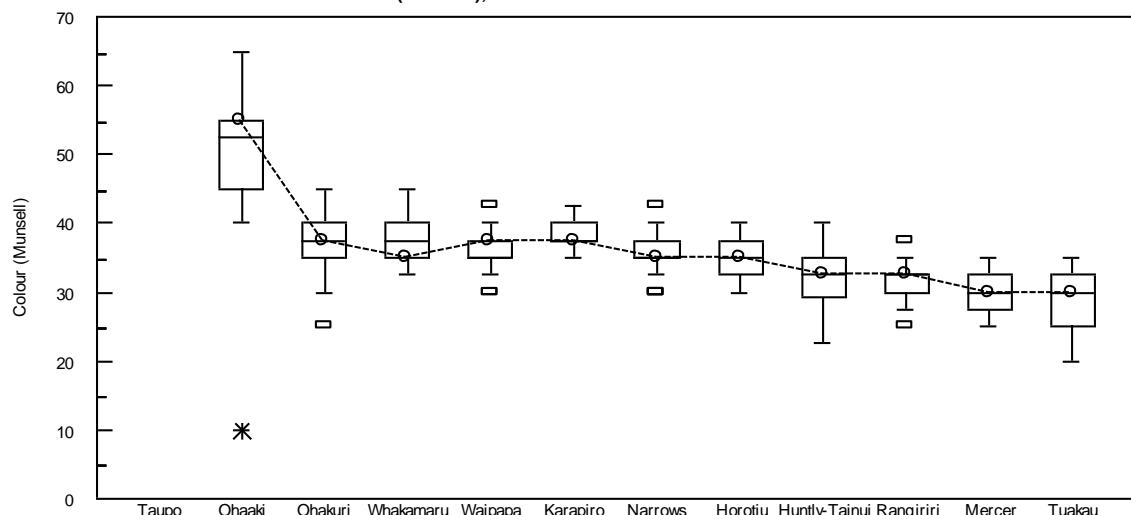

### Boxplots are used to present data

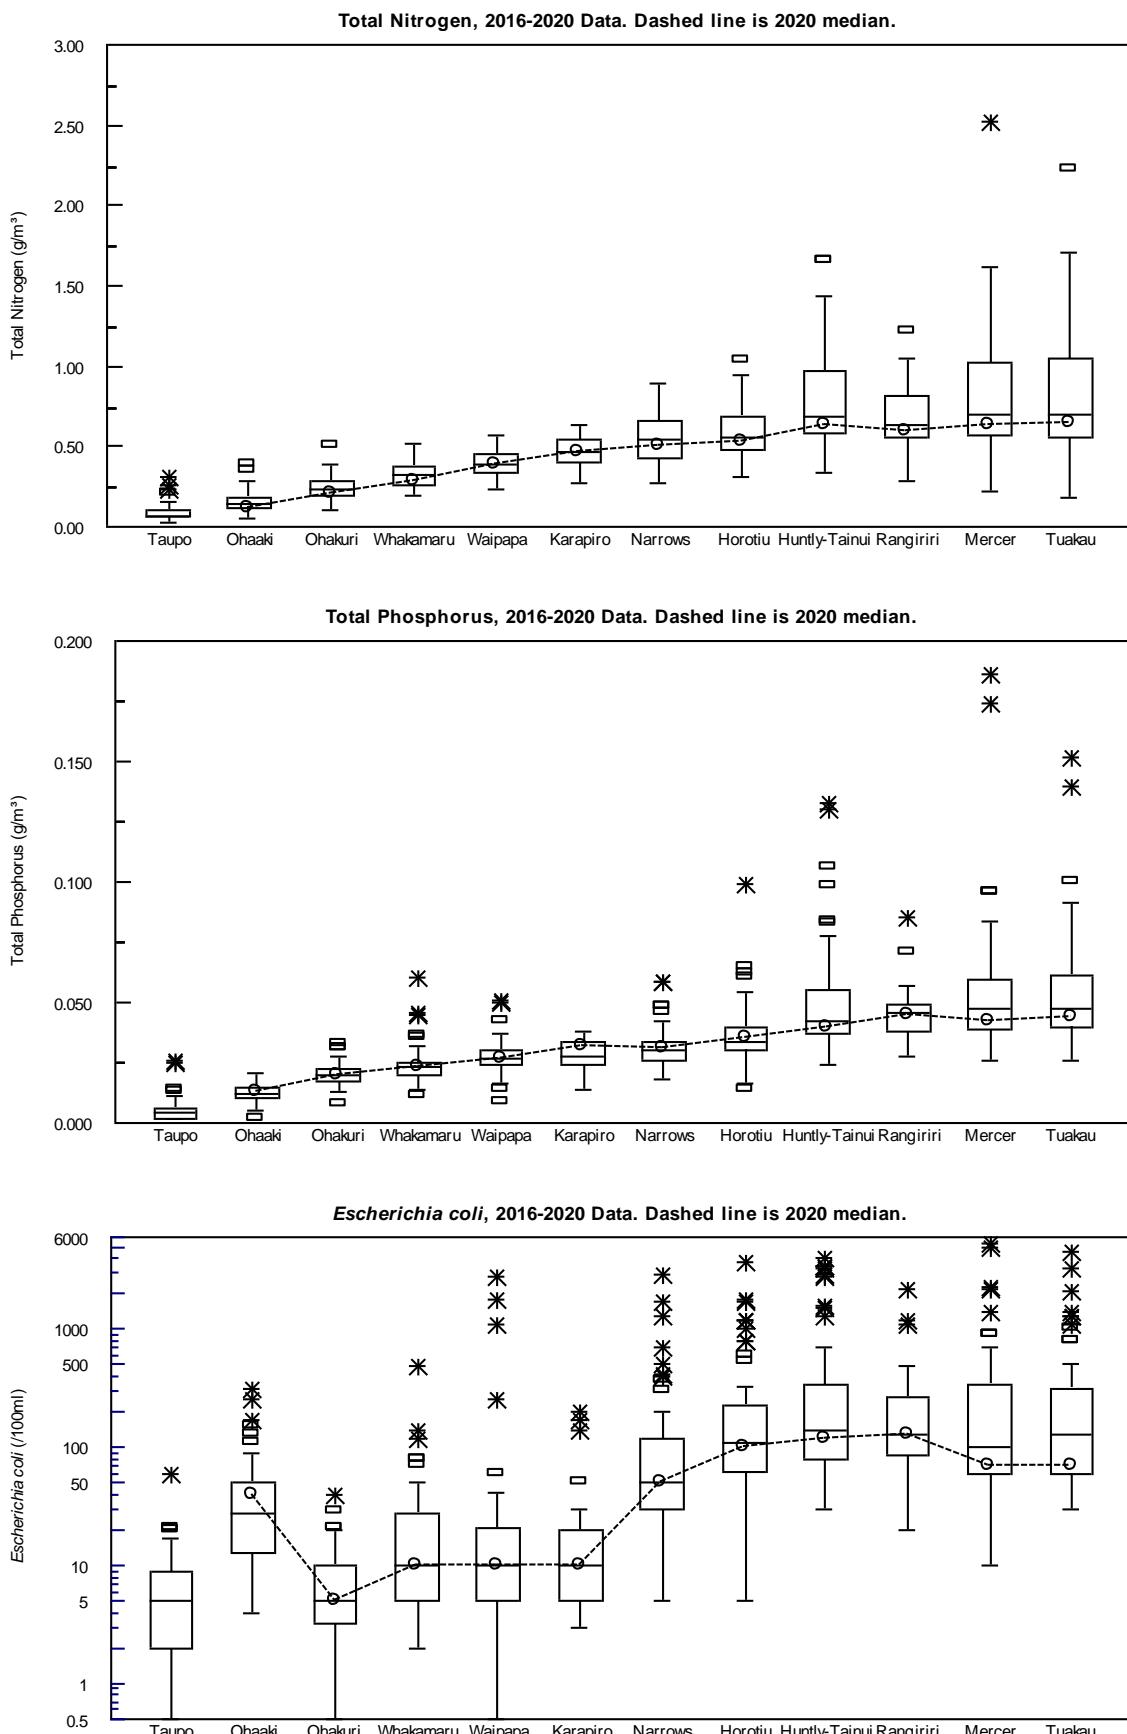

**Black Disk, 2016-2020 Data. Dashed line is 2020 median.**

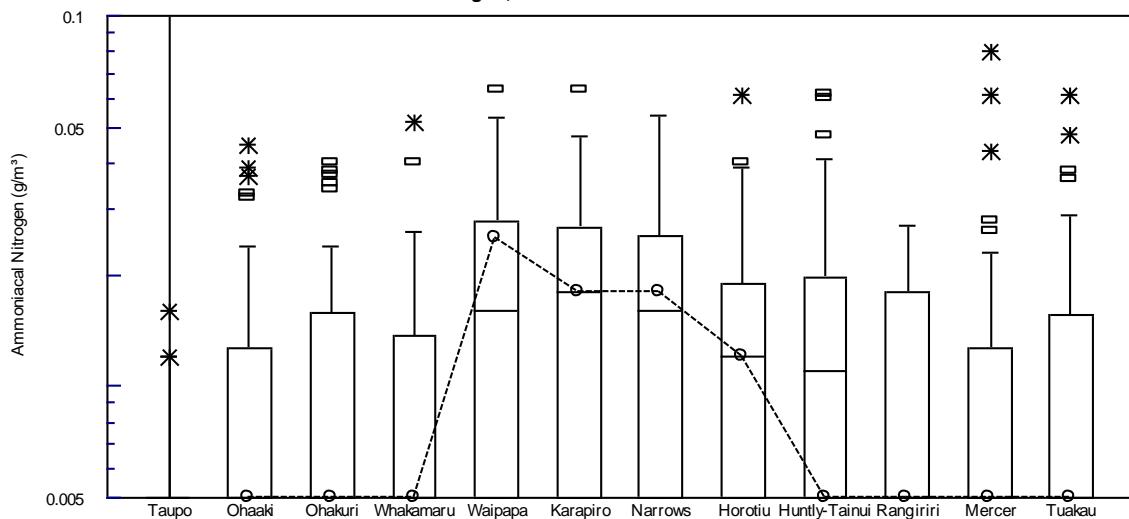

**Colour (Munsell), 2016-2020 Data. Dashed line is 2020 median.**

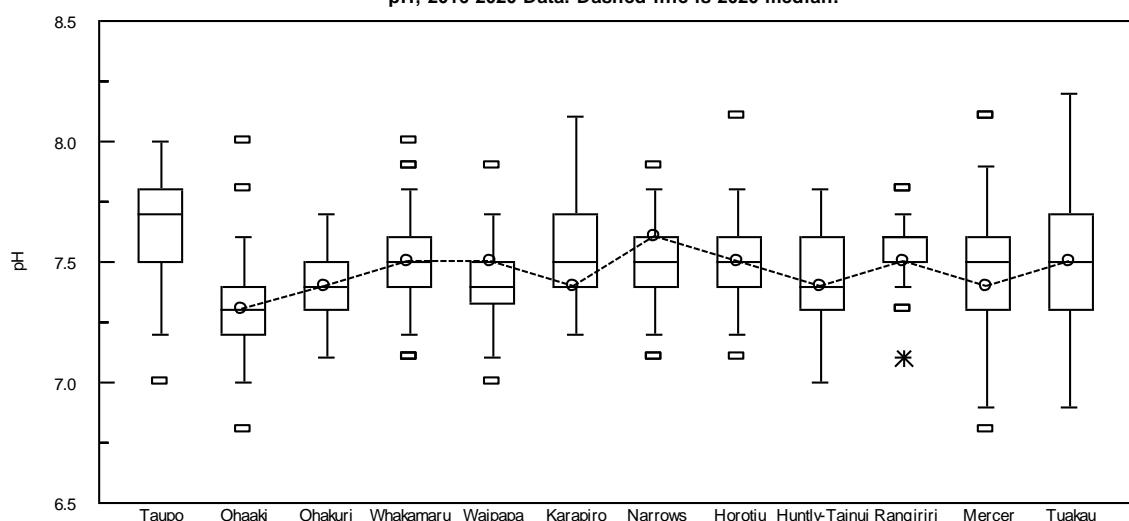

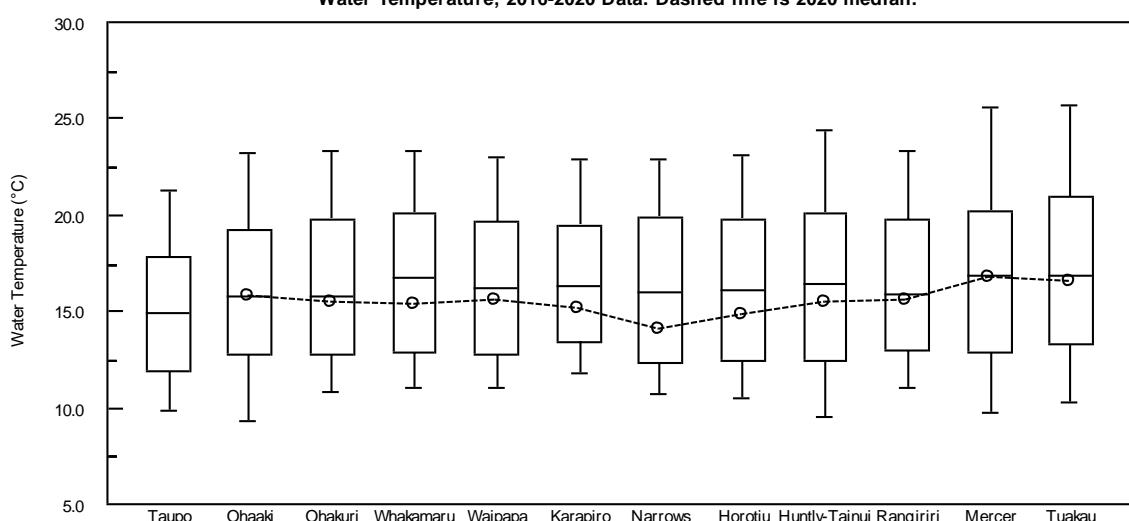

Ammoniacal Nitrogen, 2016-2020 Data. Dashed line is 2020 median.

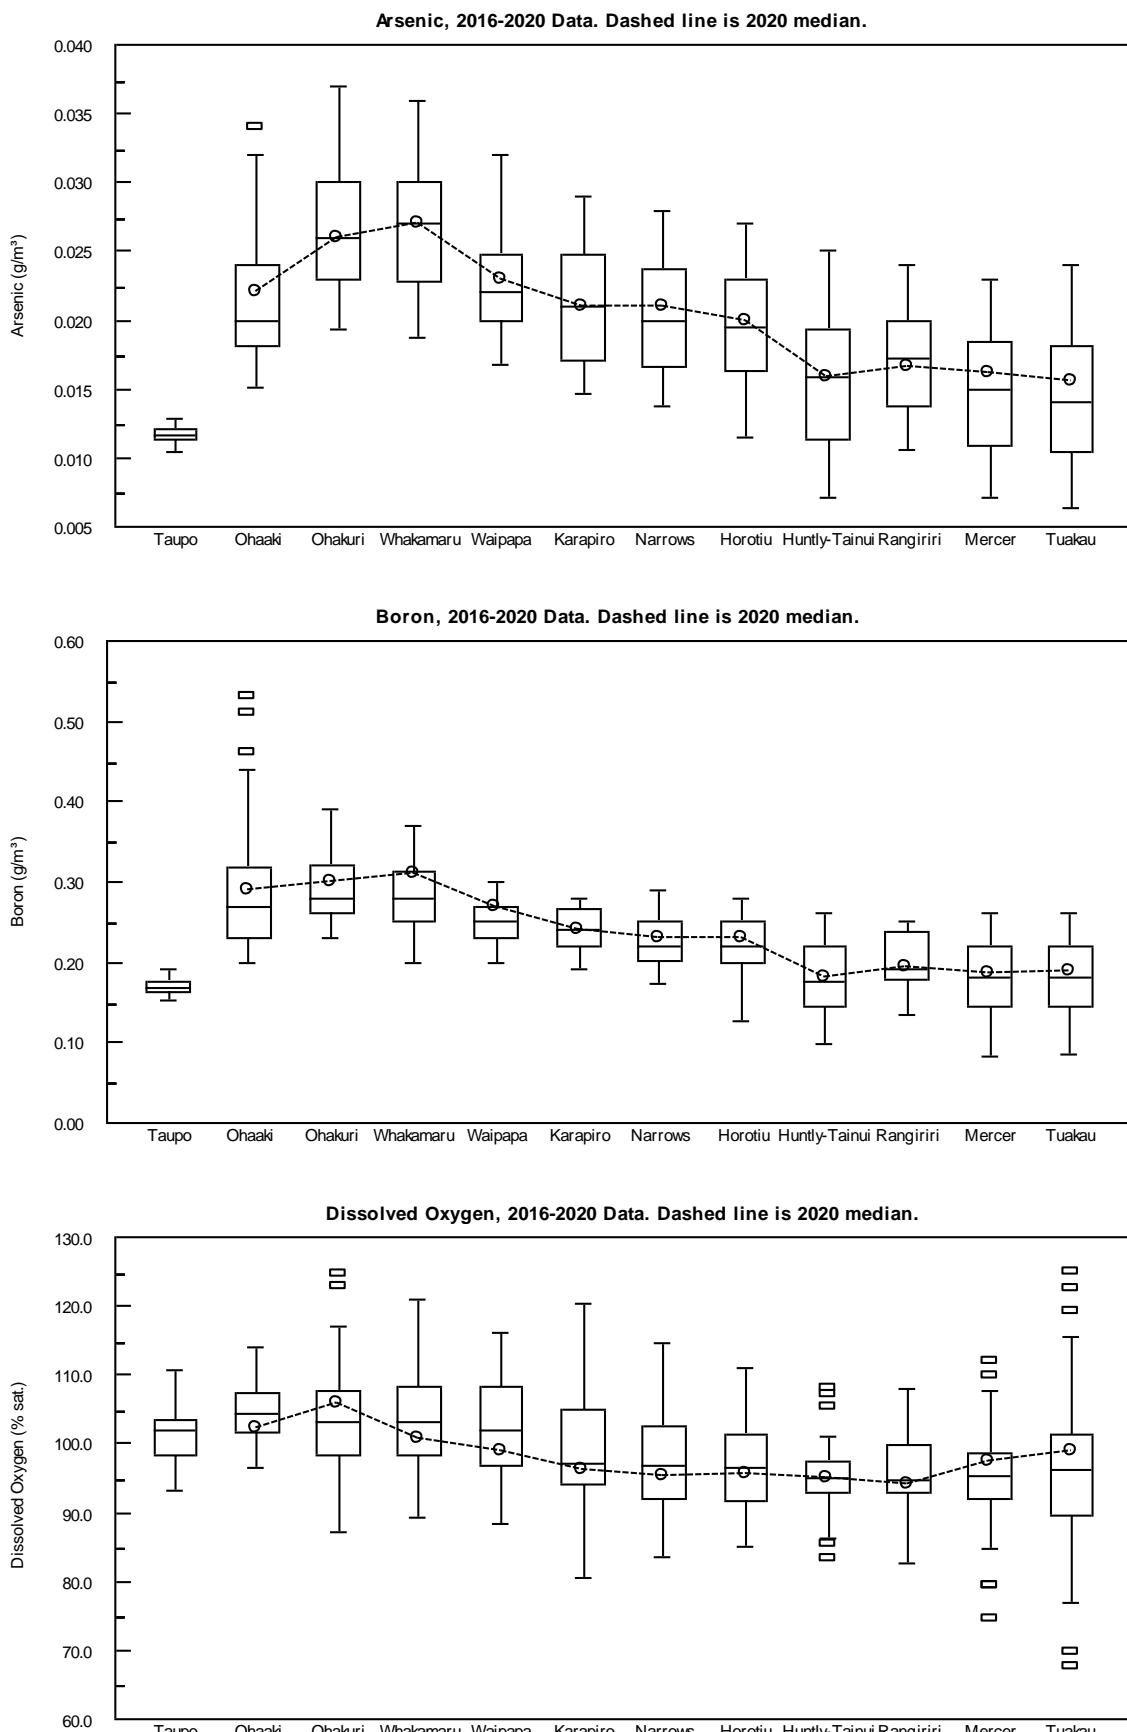

pH, 2016-2020 Data. Dashed line is 2020 median.

Water Temperature, 2016-2020 Data. Dashed line is 2020 median.

## Comparison with water quality standards

**Table 4:** Number of monthly samples (2020) complying with the "satisfactory" water quality guidelines and standards

Clarity samples excluded because flow exceeded the upper decile flow.

Superscripts denote the number of missing samples when there were fewer than 12 in the year.

Clarity samples excluded because flow exceeded the upper decile flow.

Superscripts denote the number of missing samples when there were fewer than 12 in the year.

## Raw data

**Table 6: Raw data summary: Samples collected compared with the "satisfactory" water quality standards in the year 2020**

| Date                 | Time | Flow  | BDisk m | Colour (Munsell) | Cond mS/m | pH    | Temp °C    | DO g/m³ | DO% sat. | BOD-5d g/m³ | Turb NTU | TDS g/m³ | NNN g/m³ | NO <sub>2</sub> -N g/m³ | NH <sub>4</sub> N g/m³ |
|----------------------|------|-------|---------|------------------|-----------|-------|------------|---------|----------|-------------|----------|----------|----------|-------------------------|------------------------|
| Satisfactory Quality |      | Water | >1.6    |                  |           | 6.5-9 | <12May-Sep |         | >80      |             | <5       |          |          |                         | <0.88                  |
| Guideline/Standard   |      |       |         |                  |           |       | <20Oct-Apr |         |          |             |          |          |          |                         |                        |

Time is New Zealand standard time 24 h clock. < means less than value stated. Underlined bold values do not comply with "satisfactory" water quality standards.

Bracketed black disk measurements were carried out at flows above the upper decile and were not assessed for compliance.

Time is New Zealand standard time 24 h clock. < means less than value stated. Underlined bold values do not comply with "satisfactory" water quality standards.

Bracketed black disk measurements were carried out at flows above the upper decile and were not assessed for compliance.

Time is New Zealand standard time 24 h clock. < means less than value stated. Underlined bold values do not comply with "satisfactory" water quality standards.

Bracketed black disk measurements were carried out at flows above the upper decile and were not assessed for compliance.

Time is New Zealand standard time 24 h clock. < means less than value stated. Underlined bold values do not comply with "satisfactory" water quality standards.

Bracketed black disk measurements were carried out at flows above the upper decile and were not assessed for compliance.

Time is New Zealand standard time 24 h clock. < means less than value stated. Underlined bold values do not comply with "satisfactory" water quality standards.

Bracketed black disk measurements were carried out at flows above the upper decile and were not assessed for compliance.

Time is New Zealand standard time 24 h clock. < means less than value stated. Underlined bold values do not comply with "satisfactory" water quality standards.

Bracketed black disk measurements were carried out at flows above the upper decile and were not assessed for compliance.

## Waikato River water quality parameters

| Water quality parameter                                 | Reason for monitoring  | Parameter monitored <sup>1</sup>                 | Comments <sup>2</sup>              |
|---|--|--|------------------------------------|
| Dissolved oxygen  | - requirement for aquatic life<br>- indicator of organic pollution<br>- indicator of photosynthesis (plant growth)                       | DO (conc.)<br>DO (%sat.)                         | routine (field)<br>routine (field) |
| Temperature   | - indicator of biological activity<br>- requirement for aquatic life<br>- mixing processes<br>- modelling studies (e.g. nutrient uptake) | Temperature                                      | routine (field)                    |
| Conductivity  | - indicator of total salts dissolved in water  | Conductivity                                     | routine                            |
| pH  | - indicator for geothermal input<br>- aquatic life protection<br>- indicator of industrial discharges, mining                            | TDS<br>pH  | routine                            |
| Clarity   | - aesthetic appearance   | Turbidity  | routine                            |
| - turbidity   | - light availability for excessive plant growth  | Black disk                                       | routine (field)                    |
| - black disk<br>(visual clarity)                        | - aquatic life protection<br>- indicator of catchment condition, land use  |  |                                    |
| Colour  | - aesthetic appearance   | Munsell colour                                   | routine (field)                    |
| - light absorption                                      | - light availability for excessive plant growth<br>- indicator of presence of organic matter   | Absorbance at:<br>340,440,780nm                  | routine                            |
| Nutrients (N and P)                                     | - enrichment, excessive plant growth   | NO <sub>3</sub> -N+NO <sub>2</sub> -N            | routine                            |
| chlorophyll <i>a</i>                                    | - nutrient limitation for plant/algae growth   | NH <sub>4</sub> -N, TKN<br>DRP, TP, Chl <i>a</i> |                                    |
| Geothermal contaminants                                 | - indicators of geothermal inflows<br>- aquatic life protection (ecotoxicity)<br>- drinking water (human health aspects)                 | Cl, Li, B, As                                    | routine                            |
| Organic carbon  | - indicator of organic pollution<br>- catchment characteristics  | BOD <sub>5</sub><br>TOC/DOC                      | routine                            |
| Faecal bacteria   | - indicator of pollution with faecal matter<br>- disease risk for swimming etc.  | E. Coli<br>ENT<br>FC                             | routine                            |
| - <i>E. coli</i><br>- enterococci<br>- faecal coliforms |  |  | routine                            |

<sup>1</sup> see last page of Appendix III for the meaning of the abbreviations.

<sup>2</sup> routine means sampled monthly.

## Guidelines and standards

Details of water quality guidelines and standards for “satisfactory” water quality

| Parameter                      | Critical value(s)                      | Source   |
|--------------------------------|--|--|
| Dissolved oxygen               | >80% of saturation concentration       | RMA Third Schedule, Classes AE, F, and FS.   |
| Dissolved oxygen               | >4.0 mg/L 1-day minimum                | National Policy Statement for Freshwater Management 2020, Appendix 2B, Table 17.   |
| Dissolved oxygen               | >5.0 mg/L 7-day mean minimum           | National Policy Statement for Freshwater Management 2020, Appendix 2B, Table 17.   |
| pH                             | 6.5–9                                  | ANZECC. (2000). Australia and New Zealand Guidelines for Fresh and Marine Water Quality. Australian and New Zealand Environment and Conservation Council. Agriculture and Resource Management Council of Australia and New Zealand. ISBN 09578245 0 5. |
| Turbidity                      | <5 NTU                                 | Studies of adverse effects on underwater light—and thus on plant and invertebrate production—in certain South Island streams (Davies-Colley 1991).   |
| Ammoniacal-nitrogen            | <0.88 g/m <sup>3</sup>                 | USEPA (1998) value for 1-hour exposure at pH 9.  |
| Temperature                    | <12°C (May – Sep)<br><20°C (Oct – Apr) | Waikato Regional Council Proposed Regional Plan standards for trout fisheries and trout spawning (1998).   |
| Total phosphorus               | <0.04 g/m <sup>3</sup>                 | From upper quartile values for 77 New Zealand rivers in NIWA’s National Water Quality Network (after Smith & Maasdam 1994)—note that the guidelines for “excellent” conditions are the lower quartile concentrations for these rivers.                 |
| Total nitrogen                 | <0.5 g/m <sup>3</sup>                  | From upper quartile values for 77 New Zealand rivers in NIWA’s National Water Quality Network (after Smith & Maasdam 1994)—note that the guidelines for “excellent” conditions are the lower quartile concentrations for these rivers.                 |
| Water clarity at baseflow      | >1.6 m                                 | “Baseflow” defined as flows less than the upper decile flow. Guideline from Ministry for the Environment (1994).   |
| <i>Escherichia coli</i>        | <550/100 mL                            | Ministry for the Environment (2003) guidelines for the management of recreational and marine shellfish-gathering waters.   |
| Median <i>Escherichia coli</i> | <126/100 mL                            | Ministry for the Environment (1999) guidelines for the management of recreational and marine shellfish-gathering waters.   |
| Enterococci                    | <77/100 mL                             | Department of Health (1992) guidelines for “moderate” level of recreational use.   |
| Chlorophyll <i>a</i>           | <0.02 g/m <sup>3</sup>                 | Ministry for the Environment (1992).   |
| Arsenic                        | <0.01 g/m <sup>3</sup>                 | Ministry of Health (2018).   |
| Boron                          | <1.4 g/m <sup>3</sup>                  | Ministry of Health (2018).   |

## Analytical methods

### Waikato River monitoring programme - water quality parameters and analytical methods

| Id <sup>1</sup> | Parameter                       | Short name <sup>2</sup> | Method  |
|-----------------|---------------------------------|-------------------------|---|
| A340F           | Absorbance (340nm)              | A340F                   | Spectrophotometer, 1 cm path length, APHA method 5910B  |
| A440F           | Absorbance (440nm)              | A440F                   | Spectrophotometer, 1 cm path length, APHA method 5910B  |
| Arsenic         | Arsenic                         | As                      | Nitric acid digestion, ICP-MS, APHA method 3125 B / USEPA 200B, uses Tt or TR if Tr not available or average if both available  |
| BDisk           | Black Disk                      | BDisk                   | Field measurement, horizontal water transparency (20mm, 60mm, 100mm, 200mm disk) in river or trough (20mm only)   |
| BOD5Dil         | Biochemical Oxygen Demand 5 day | BOD-5d                  | Incubation 5 days at 20°C, DO-meter, No nitrification inhibitor added, unseeded, APHA method 5210 B   |
| Boron           | Boron                           | B                       | ICP-MS, APHA method 3125 B. Uses either TR or Tt or average if both available   |
| CHLA            | Chlorophyll <i>a</i>            | CHLa                    | Acetone extraction. Spectroscopy. APHA method 10200 H (modified)  |
| Cl Diss         | Chloride Dissolved              | CL                      | Filtered sample. Ferric thiocyanate colorimetry, Discrete analyser. APHA method 4500 Cl⁻ E (modified)   |
| Colour_Munsell  | Colour (Munsell)                | Colour                  | Field measurement, Munsell colour patches   |
| DO              | Dissolved Oxygen                | DO                      | Field measurement (Hach DO meter, model HQ 30d)   |
| DO_Percent      | Dissolved Oxygen                | DO%                     | Field measurement (Hach DO meter, model HQ 30d)   |
| DOC             | Dissolved Organic Carbon        | DOC                     | Filtration, acidification, purging to remove inorganic C, persulphate oxidation, IR detection. APHA method 5310 C (modified)  |
| DRP             | Dissolved Reactive Phosphorus   | DRP                     | Filtration, Molybdenum Blue Colorimetry. Discrete analyser. APHA 4500 PE (modified)   |
| EC25            | Conductivity at 25 DegC         | Cond                    | ab Meter @ 25°C. APHA method 2510B  |
| EColi           | <i>Escherichia coli</i>         | E coli                  | Membrane Filtration (mFC Agar) confirmation by MUG Agar. APHA method 9222 G   |
| ENT             | Enterococci                     | ENT.                    | Membrane Filtration (mE Agar) confirmation by EIA Agar. APHA method 9230 C  |
| FColi           | Faecal Coliforms                | F colo                  | Membrane Filtration (mFC Agar). APHA method 9222 D  |
| Li              | Lithium                         | Li                      | ICP-MS, method APHA 3125 B  |
| NH4             | Ammoniacal Nitrogen             | NH₄N                    | Filtration, Phenol/Hypochlorite Colorimetry. Discrete analyser. APHA method 4500-NH3 F (modified).  |
| NitriteNitrogen | Nitrite Nitrogen                | NO₃-N                   | Calculation: (Nitrate-N + Nitrite - N) - Nitrite - N  |
| NNN             | Nitrate/Nitrite Nitrogen        | NNN                     | Automated Cadmium reduction. Flow injection analyser. APHA method 4500 - NO₃-I (modified).  |
| pH              | pH                              | pH                      | Lab Meter @ 25°C. APHA method 4500-H <sup>+</sup> B   |
| TDSMisc         | Total Dissolved Solids          | TDS                     | Filtration, gravimetric. APHA 2540 C (modified)   |
| TKN             | Total Kjeldahl Nitrogen         | TKN                     | Acid digestion. Phenol/Hypochlorite colorimetry. Discrete analyser. APHA method 4500-Norg D   |
| TN              | Total Nitrogen                  | TN                      | Calculated from NNN + TKN (Nitrite/Nitrate Nitrogen + Total Kjeldahl-Nitrogen)  |
| TOC             | Total Organic Carbon            | TOC                     | Acidification, purging to remove inorganic C, persulphate oxidation, IR detection. APHA method 5310 C (modified)  |
| TP              | Total Phosphorus                | TP                      | Acid persulphate digestion, Colorimetry. Discrete Analyser. APHA method 4500-P B E (modified). Also modified to include the use of reductant to eliminate interference from arsenic present in the sample. NAWASCA Pub 38, 1982 |
| Turb_NTU        | Turbidity                       | Turb                    | Turbidity Meter Hach 2100N. APHA method 2130 B  |
| WT              | Water Temperature               | Temp                    | Field measurement (Hach DO meter, model HQ 30d)   |

<sup>1</sup>Water quality parameter identification code refers to Waikato Regional Council's water quality database (WISKI) parameter short name.

<sup>2</sup>Water quality parameter short name used in this report

APHA = Standards Methods for the Examination of Water and Wastewater, 22nd Edition, 2012, APHA, AWWA, WEF

ICP-MS = Inductively Coupled Plasma – Mass Spectroscopy
